

## High Static Ducted, 10.5kW

Ducted

White

High Static Ducted systems offer total heating and cooling to every room, with an indoor unit hidden in the ceiling and discreet vents.

- Precise temperature control, with an operational range from -20°C to 50°C
- Designed to fit the standard truss spacings of New Zealand homes for simple installation
- Remote control using the SmartHQ™ app when the optional Wi-Fi accessory is installed
- Blue Fin coating on the outdoor condenser helps to prevent environmental corrosion

### FEATURES & BENEFITS

#### Comfort in all conditions

Control the humidity level inside using the Dry function. By removing excess moisture in the air, you can create a comfortable and healthy environment that feels cooler – all while using less energy than Cool mode.

#### Control from anywhere

Installing the optional Wi-Fi accessory lets you control your air conditioning from your phone with the SmartHQ™ app, or use voice control with a smart home device.

#### Efficient and effective

The DC fan motor is more energy efficient than a standard AC motor and it is also highly adjustable. This means you can adjust the static pressure and airflow for optimal performance to suit your layout.

#### Simple installation

Designed to fit the standard dimensions of New Zealand homes, the indoor unit easily fits between roof truss spacings of 600mm. Plus, the removable panels make for easy installation and servicing.

#### Peace of mind

Moisture from the air is collected during normal operation. The High Static Ducted indoor unit includes a second condensate draining tray to collect liquid overflow in case of a blockage, protecting your ceiling from damage.

#### Central controller

With an optional central controller, you can control individual or connected units from a simple-to-use display. Schedule your air conditioning to turn on to create the perfect environment just before you wake up, or switch off at the end of the workday.

### SPECIFICATIONS

#### Capacity

Cooling capacity (kW)	<b>10.0kW</b>
Heating capacity (kW)	<b>11.5kW</b>

#### Consumption

COP	<b>3.61</b>
EER	<b>3.21</b>
